Aimetis Crowd Detection is an embedded video analytic that offers crowd detection, event triggering, and alarms for Axis network cameras and encoders.

You can define the area that Crowd Detection monitors for the number of people in the monitored area (capacity) and the percentage of the monitored area with people (occupancy). Crowd Detection can trigger alarms when it detects a specific capacity or occupancy.

To use Crowd Detection alarms in Symphony, you must add the camera with the Crowd Detection embedded video analytic to Symphony and create an alarm in Symphony for the camera.

The live view for Crowd Detection includes the following elements:

- Blue outlines mark crowds.
- Red outline mark crowds that trigger alarms.

The plot for Crowd Detection displays the following information:

- The solid blue line shows the number of people in the monitored area (capacity).
- The solid orange line shows the percentage of the monitored area with people (occupancy).
- The dotted lines show the alarm threshold. Blue dotted lines show a capacity threshold and orange dotted lines show an occupancy threshold.
Installation

Install Crowd Detection on a camera using the camera Web interface.

Requirements

<table>
<thead>
<tr>
<th>Component</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Camera CPU</td>
<td>ARTPEC-4</td>
</tr>
<tr>
<td></td>
<td>ARTPEC-5</td>
</tr>
<tr>
<td>Camera firmware</td>
<td>Supports Embedded Development Version 2.0</td>
</tr>
<tr>
<td>License</td>
<td>Aimetis Crowd Detection (AIM-AX-CD)</td>
</tr>
</tbody>
</table>

Install Crowd Detection

2. Log in to the camera home page.
3. Click Setup.
4. Click Applications.
5. In the Upload Application pane, click Choose file and select the Crowd Detection analytic package.
6. Click Upload Package.
7. Click Applications > Crowd Detection.
8. Click Start.

Open Crowd Detection

1. Log in to the camera home page.
2. Click Aimetis Crowd Detection.
3. If this is your first time logging in, click Accept to accept the license and warranty terms.

Add a license

1. In the administration interface for the embedded video analytic, click Licensing.
2. Copy the camera MAC address.
4. Under Embedded Analytics, click Add.
5. Type a name for the camera.
6. In the MAC Address field, copy the MAC address of the camera.
7. Select I will add licenses to this camera.
8. Click Register Camera.
9. Click Embedded Analytics.
10. Copy the license key.
11. In the Embedded Analytics Web interface, click **Licensing**.
12. Click **Change**.
13. In the **License Key** field, paste the license key.
14. Press **Save**.
Configuration

Configure Crowd Detection using the administration interface in a browser. When you install Crowd Detection on a camera, you can access the administration interface from the camera home page.

Configure Crowd Detection

1. In the Crowd Detection administration interface, click **Configuration**.
2. On the **Overview** tab, configure general settings for the camera.

![Configuration](image1)

3. On the **Processing Mask** tab, set the areas in the image that the camera ignores or analyzes.

![Processing Mask](image2)

4. On the **Calibration** tab, set the location and orientation of the camera.

![Calibration](image3)
5. On the **Sensitivity** tab, set the sensitivity of the camera to the percentage of the monitored area with people (occupancy) and the number of people in the monitored area (capacity).

6. On the **Capacity** tab, set the maximum capacity.

7. On the **Rules** tab, set the criteria for alarms.
8. On the **Advanced** tab, edit the XML file that contains the configuration settings.

9. Click **Save**.

**Settings**

**Overview**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Analysis FPS</td>
<td>Set the frames per second for the camera on which Crowd Detection is active. This value is fixed at 1 FPS.</td>
</tr>
<tr>
<td>Analysis Resolution</td>
<td>Set the resolution for the camera on which Crowd Detection is active. Set this value so that people in the monitored area appear as at least 8 pixels in width.</td>
</tr>
</tbody>
</table>

**Processing Mask**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drawing Mode</td>
<td>Select whether the paintbrush marks areas in the processing mask image to include (Anlayze) or exclude (Ignore).</td>
</tr>
<tr>
<td>Size</td>
<td>Select the size of the paintbrush that you use in the processing mask image.</td>
</tr>
<tr>
<td>Updates</td>
<td>Select whether the image in the processing mask is static or live.</td>
</tr>
</tbody>
</table>

**Calibration**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Field of view</td>
<td>Define the horizontal field of view for the camera.</td>
</tr>
<tr>
<td>Pan</td>
<td>Type the angle (degrees) of horizontal rotation around the vertical axis of the camera.</td>
</tr>
<tr>
<td>Twist</td>
<td>Type the angle (degrees) of rotation around the long axis of the camera.</td>
</tr>
<tr>
<td>Height</td>
<td>Set the height (meters) on the camera. You can also adjust the height by dragging the camera in the layout diagram.</td>
</tr>
</tbody>
</table>
## Setting

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance</td>
<td>Set the distance (meters) between the camera and the front of the monitored area. You can also adjust the distance by dragging the camera in the layout diagram.</td>
</tr>
</tbody>
</table>

## Sensitivity

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Occupancy</td>
<td>Set how sensitive the camera is when assessing the percentage of the monitored area with people (occupancy). Decreasing the sensitivity will decrease the occupied area and increasing the sensitivity will increase the occupied area.</td>
</tr>
<tr>
<td>Capacity</td>
<td>Set how sensitive the camera is when assessing the number of people in the monitored area (capacity). Decreasing the sensitivity will decrease the number of detected people and increasing the sensitivity will increase the number of detected people.</td>
</tr>
</tbody>
</table>

## Capacity

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capacity</td>
<td>Use the slider to define the maximum number of people that can be in the monitored area.</td>
</tr>
</tbody>
</table>

## Rules

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm</td>
<td>Select whether the event responds to capacity or occupancy.</td>
</tr>
<tr>
<td>Duration</td>
<td>Set the amount of time over which Crowd Detection averages values. A higher duration reduces the number of alarms but increases the possibility of missed alarms. A lower duration increases the number of alarms but increases the possibility of false alarms.</td>
</tr>
<tr>
<td>Threshold</td>
<td>Use the slider bar to define the values that trigger the event. Values that fall outside of the threshold trigger the event.</td>
</tr>
</tbody>
</table>

## Advanced

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Import XML</td>
<td>Import the configuration XML from a file.</td>
</tr>
<tr>
<td>Export XML</td>
<td>Export the configuration XML to a file.</td>
</tr>
<tr>
<td>Show XML</td>
<td>Show the configuration XML.</td>
</tr>
</tbody>
</table>

## Draw a processing mask

1. On the camera home page, click the embedded video analytic.
2. Click **Configuration > Processing Mask.**

3. Perform one of the following tasks:
   a) To define an area that the camera analyzes, select **Analyze.**
   b) To define an area that the camera does not analyze, select **Ignore.**
   By default, the entire camera view is set to analyze.

4. Use the **Size** slider to set the size of the paint brush.

5. To use a live image to define the processing mask, select **Live.**

6. Use the mouse to draw the area on the camera view.

7. Click **Save.**

### Create an alarm

1. On the camera home page, click Crowd Detection.

2. Click **Configuration > Rules.**

3. In the **Alarm type** list, select whether the number of people in the monitored area (capacity) or the percentage of the monitored area with people (occupancy) triggers the alarm.

4. In the duration box, define the amount of time (in seconds) that a condition must exist to trigger an alarm.
   
   The default value is 5 seconds.

5. Using the slide bar, define the conditions that trigger an alarm. Values that fall outside of the slider bar trigger an alarm.

6. Click **Save.**
Start or stop an embedded video analytic

1. On the camera home page, click **Setup**.
2. Click **Applications**.
3. In the **Installed Applications** list, select the embedded video analytic.
4. Click **Start** or **Stop**.

Reset Crowd Detection

1. On the camera home page, click Crowd Detection.
2. Click **Help**.
3. Click **Reset to Factory Defaults**.
